

A white Arctic fox is the central focus, sitting on a large, grey rock. The fox has bright orange eyes and a black nose. The background is a blurred forest with brown and orange leaves, suggesting an autumn setting. The text 'Arctic Foxes' is written in a purple, cursive font across the middle of the image.

Arctic Foxes

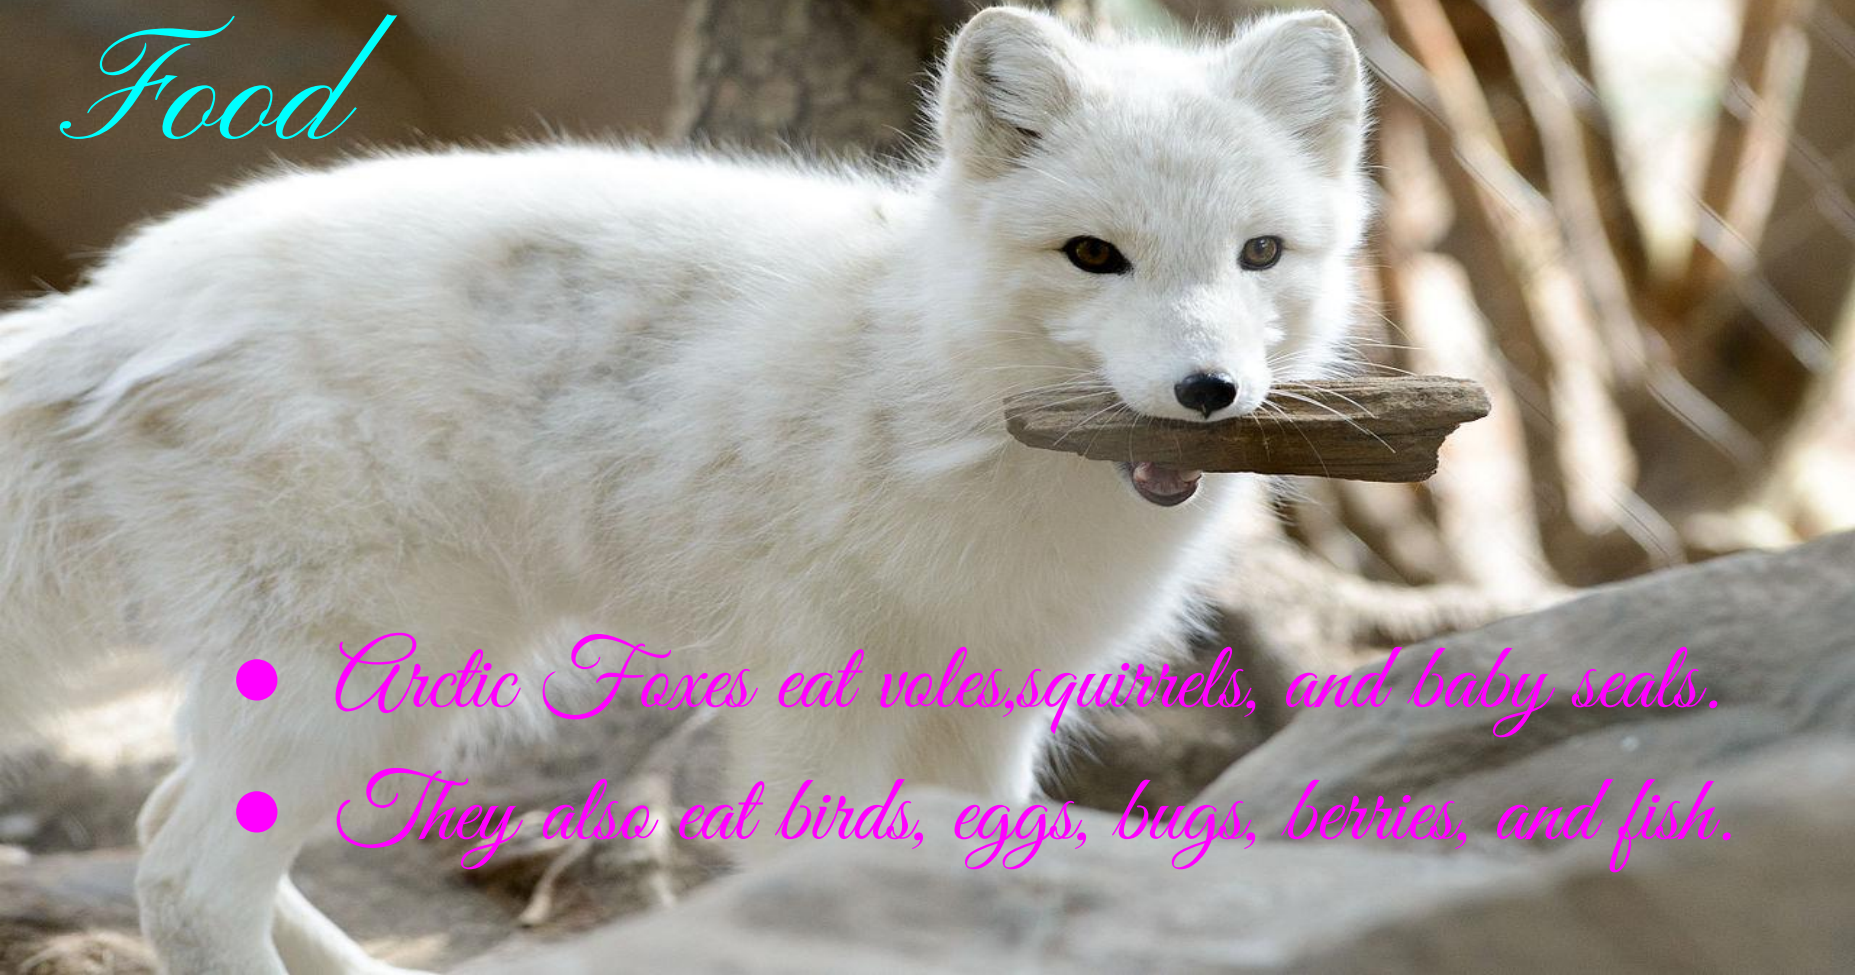

By: Janice

Habitat

- *They can live in North America, Europe, and Asia.*
- *They also live near the North Pole where it is very cold and snowy.*

Food

- *Arctic Foxes eat voles, squirrels, and baby seals.*
- *They also eat birds, eggs, bugs, berries, and fish.*

Life cycle

A close-up photograph of a fluffy white puppy lying on a dark, textured log. The puppy's head is resting on the log, and its eyes are partially closed. Its fur is very soft and voluminous. The background is blurred, showing dark tree branches and some light-colored leaves.

- *They have 4 to 11 kits.*
- *When pups are three weeks old, then their mom leaves.*

Description

- *They have a small body.*
- *Arctic foxes are part of the the canid family like wolves.*

Fun Facts

- *Arctic foxes tails are called brush.*
- *They have fur on the bottom of their paws to move on icy ground.*
