

Dolphins

By Bojana

DESCRIPTION

- DOLPHINS HAVE A DORSAL FIN ON THEIR BACK.
- DOLPHINS ALSO HAVE TAILS.
- THEIR TAILS HELP THEM MOVE.
- THEIR WEIGHT IS AROUND 1,000 POUNDS.

HABITAT

- DOLPHINS LIVE IN OCEANS AND RIVERS.
- THE OCEAN KEEPS DOLPHINS SKIN SOFT AND OCEANS HAVE SALT IN THEM.
- THEY LIVE IN PODS WHICH ARE 12-15 DOLPHINS.

FOOD

- 
- A close-up photograph of a dolphin's head in clear, bright blue water. The dolphin's mouth is wide open, revealing a row of small, sharp, yellowish teeth along the upper and lower jaws. The dolphin's skin is a dark grey color, and its eye is visible on the right side of its head. The water around the dolphin is rippling, and the overall scene is brightly lit, suggesting a sunny day.
- Dolphins eat fish, squid, crab, shrimp, mackerel, and anchovies.
 - They swallow food to break it up.
 - Did you know they have 220 small teeth?
 - Sometimes dolphins hunt by them self.

Life Cycle

- A calf can swim as soon as it's born.
- It drinks its mother's milk from its body.
- It starts to eat fish when it's 6 years old.
