

# KILLER BEES

By Kaiyan

## DESCRIPTION

- They are only  $\frac{3}{4}$  inches.
- Their body is fuzzy with black stripes.

# Habitat

- Killer bees live in holes in the ground.
- Their hives can also be on low branches.

# Food

- 
- A close-up photograph of a beekeeper wearing a white protective suit and a mesh veil. The beekeeper is holding a wooden frame covered in a thick layer of bees. The background shows a lush green field with trees under bright sunlight. A white horizontal bar is visible in the lower-left corner of the image.
- They get food from flowers.
  - They eat the pollen from the flower and use it to make honey.

## Life cycle

- The queen bee can lay 80,000 eggs in a year.
- The eggs hatch in three days.
