

Owls!

By Liam

Description

- Owls are 18 inches tall.
- Their wingspan is about 3.3 feet.
- They have claws called talons

Habitat

- **Owls almost live everywhere in the world.**
- **They live in every continent.**
- **They live in woodlands.**
- **Some make a nest in a tree.**

- They eat frogs, insects and mice
- They eat their prey whole or tear the prey in chunks.
- They do not chew their food because they do not have teeth.

Food

Life Cycle

A Great Horned Owl is perched on a nest made of sticks and twigs, situated within a tree. The owl has large, prominent ear tufts and is looking directly at the camera with its yellow eyes. The background shows the intricate network of branches and the textured bark of the tree.

In early spring, a male and female meet up and mate.

The female owls lay on to 12 eggs.

A newborn is covered in fluffy down.

Fun facts

- There are Mexican, California and northern.
- Owls can turn their heads nearly all the way around.
- The female owls are bigger than males.
