

Polar Bear

By: Jayla

Description

- Polar Bears have two layers of fur to keep them warm.
- Polar Bears weigh between 700 to 1,600 pounds.

Habitat

- Polar Bears live in the large island of floating ice called ice caps.
- Their habitat protects the polar bears from freezing weather.
- They use their paws to swim in the freezing water.

Life cycle

- Baby cubs stay warm by cuddling up to their huge mothers.
- Polar bears walk for hundreds of miles.

Food

- Mother polar bears eat nothing all winter.
- Polar bears eat walrus, seabirds, and seals.

Fun Facts

My favorite fact is that polar bears can walk for 60 miles.
